Ms Jenny Lewis (RNHRD)

Ms Catherine Taylor (RSD UK)

The Forward

Dame Carole Black DBE PRCP

Content & Description

This 247 page paperback book is fascinating insight into Complex Regional Pain Syndrome, aka Reflex Sympathetic Dystrophy. It takes the reader through signs & symptoms, diagnosis, treatments, current research while giving perspectives of patients, doctors, researchers and carers.

This book takes a novel approach integrating professional understanding with patient perspective. The authors delve into the bizarre condition and explore the edges of scientific understanding at the same time as allowing the patient to discuss how it feels to live with this condition. They discuss aspects of the condition not discussed elsewhere using topics such as hyperalgesia, agnosia, dystonia, synaesthesia and much more.

The easy to read text and format makes it perfect for medical professionals and lay-people alike. The research modules cover as yet unpublished information surrounding brain mapping and mirror visual feedback, indicating in a scientific perspective how this novel treatment helps the patient.

It covers the positive aspects too, which many books omit, explaining that 50% of patients do get better! Over 120 black and white images make this book appealing to the reader; it has 14 colour plate pages giving graphic representation of the condition.

How to Order

Amazon (UK)

ISBN No 1905553145
